

Medical Industries America is serious about the sleep market and this is evident in the design of our newest generation of CPAP devices. The RemRest Series is engineered to meet the needs of each level of the sleep therapy market — patient, physician, dealer as well as the growing number of international customers.

Appreciating that noise is a primary concern for any sleep patient, we have introduced *Noise Reduction Technology* into our new RemRest Series and achieved a sound level measuring at an industry leading <30dba — serious quiet.

Compliance issues have also been addressed with the design of features such as *Auto Compliance* and *Interface Alert* along with data storage and uploading/downloading capabilities.

Intelligent engineering has maintained the RemRest's compact dimensions, allowing the device to fit easily on a nightstand as well as be conveniently portable for those overnight travelers.

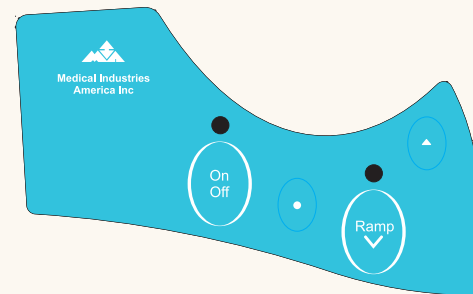

We have developed a 3-Tier program allowing each segment of the market the ability to select the right product for their own, and their patient's, particular needs.

RemRest

Tier 1

The basic model of the new series has several significant performance

enhancements. These include our Noise Reduction Technology (NRT), to provide patients with extremely quiet operation, digital ramp and pressure controls and international power supply capabilities. This model is designed to be your low-cost alternative in the demanding managed care marketplace. Optional DC power cord and carry bag provide additional versatility and mobility to this unit.

3 Year Warranty

RemRest Premium

Tier 2

The **RemRest Premium** demonstrates our commitment to advancements in CPAP

technology. Engineered with an internal pressure transducer with real-time pressure measurements that continually monitor the prescribed setting and adjusts the blower for losses in pressure due to resistance in the interface circuit or changes in altitude. The LCD screen provides readouts of total running time, patient usage time and total time and is used for setting ramp and pressure. Major compliance issues are addressed with the addition of the **Auto Compliance** feature which monitors usage and has an indicator light that will flash if a patient's usage is less than 28 hours per week. This will provide early identification and intervention opportunities in the event of a non-compliant patient. The **dynamic calibration** feature can be used to overcome the resistance inherent in nasal prong interfaces.

3 Year Warranty

RemRest Compliance

Tier 3

The **RemRest Compliance** model has every feature included on the Tier 2 PLUS enhanced

features for measuring and downloading patient compliance data and an **Interface Alert**, which notifies the patient every 90 days that their interface needs replacing. Through the use of a real-time clock and internal flash memory the unit stores compliance data that is easily uploadable via the DB9 serial port. The information gives healthcare providers the ability to print out compliance data, which is becoming essential for continued reimbursement. Some compliance data can be accessed over the phone by having the patient hold the mode button down and the data code is then displayed on the LCD screen and interpreted by the healthcare provider. Rounding out this complete compliance package is the quick loading, easy-to-use **RemRest Compliance Software** for PC.

3 Year Warranty
